

Lizerna Protexer

Finishing agent for textiles

Properties

- stabilizes the fibers
- reduces creasing
- maintains the natural fiber properties

Application

Lizerna Protexer is a finishing product for the stabilization of the fibres and thus the textile, especially during the subsequent drying.

Furthermore, the formation of creases and thus the finish loss are significantly reduced.

Selected polymers with a high affinity to textiles ensure the unique properties of Lizerna Protexer. As the main component of the Wet Cleaning 4.0 process, it is used in the last rinse bath. There it is absorbed substantively onto the fiber and protects sensitive fabrics (wool, silk, viscose) against the subsequent drying process. This shortens the entire BÜFA wet cleaning process to less than 1 hour.

Dosing

Added to the last rinse bath

Concentration	6 - 10 ml / kg dry wash
---------------	-------------------------

Technical data

Density (20°C)	pH-value
1,00 kg / l	3,5 - 4,5

Notes

Store the product only in its original container.

The product is sensitive to frost and heat and must not be stored at temperatures below 0°C and above 40°C.

Irreparable product damage is possible.
