

FoamEx Universal

Defoaming additive

Properties

- Highly concentrated and therefore economical to dose
- Particularly suitable for destroying foam consisting of saponified polymer components from paints and varnishes
- Reduces foam in turbulent cleaning baths
- Pleasant to handle

Application

FoamEx Universal is a powerful defoaming additive developed for aqueous, alkaline washing baths. It is particularly suitable for the destruction of foam consisting of saponified polymer components of all types of paints and varnishes. FoamEx Universal also reduces foam caused by turbulence in aqueous, alkaline washing baths. The wash bath modified by the additive is only foam-free above 40 °C. The optimum concentration of FoamEx Universal to be added to aqueous, alkaline wash baths depends on the foaming properties. Good mixing of the wash bath also guarantees a high degree of effectiveness of FoamEx Universal. The product is milky cloudy; flocculation does not impair the effect.
Instructions for use: Shake well before use!

Dosing

directly into the well agitated cleaning bath

Concentration	0,5 % – 1,0 %
Temperature	45 °C – 80 °C
Addition	Recommendation for prevention

directly onto the foam

Concentration	1 % – 3% verdünnen mit 25 % – 50 % Wasser
Temperature	45 °C – 80 °C
Addition	Recommendation for immediate assistance

Technical data

Density (20°C)	pH-value
1,00 kg / l	6,5

Notes

Store the product in its original container. Storage should be frost-proof, although the solidified products can be used again after thawing without any loss of quality.
